Appendix A: Complete Survey Responses

Responses excluding "don't know"

The following pages contain a complete set of responses to each question on the survey, excluding the "don't know" responses. The percent of respondents giving a particular response is shown followed by the number of respondents (denoted with "N=").

Table 1: Question 1

Please rate each of the following aspects of quality of life in Albemarle County:	Ex	Excellent		Good	F	air	F	oor	To	otal
Albemarle County as a place to live	48%	N=180	42%	N=157	9%	N=35	0%	N=0	100%	N=372
Your neighborhood as a place to live	50%	N=186	40%	N=149	9%	N=33	1%	N=4	100%	N=372
Albemarle County as a place to raise children	51%	N=161	42%	N=130	6%	N=20	0%	N=1	100%	N=312
Albemarle County as a place to work	29%	N=93	44%	N=140	23%	N=75	4%	N=12	100%	N=320
Albemarle County as a place to visit	51%	N=184	38%	N=135	9%	N=34	2%	N=5	100%	N=357
Albemarle County as a place to retire	44%	N=125	36%	N=103	14%	N=39	6%	N=18	100%	N=285
The overall quality of life in Albemarle County	38%	N=141	51%	N=192	10%	N=39	0%	N=2	100%	N=373

Table 2: Question 2

Please rate each of the following characteristics as they relate to Albemarle County as a whole:	Exc	ellent	G	ood		air	Poor		Tota	
Overall feeling of safety in Albemarle County	31%	N=115	58%	N=213	10%	N=36	2%	N=6	100%	N=370
Overall ease of getting to the places you usually have to visit	14%	N=51	48%	N=179	27%	N=99	12%	N=43	100%	N=372
Quality of overall natural environment in Albemarle County	43%	N=160	47%	N=174	9%	N=33	0%	N=1	100%	N=368
Overall "built environment" of Albemarle County (including overall design, buildings, parks and transportation systems)	10%	N=37	48%	N=175	35%	N=127	8%	N=29	100%	N=368
Health and wellness opportunities in Albemarle County	40%	N=142	45%	N=161	13%	N=45	2%	N=8	100%	N=355
Overall opportunities for education and enrichment	45%	N=161	44%	N=160	9%	N=33	2%	N=7	100%	N=361
Overall economic health of Albemarle County	24%	N=83	52%	N=178	21%	N=72	3%	N=11	100%	N=344
Sense of community	22%	N=79	41%	N=148	29%	N=103	8%	N=30	100%	N=360
Overall image or reputation of Albemarle County	33%	N=118	49%	N=176	16%	N=59	2%	N=8	100%	N=360

Table 3: Question 3

Please indicate how likely or unlikely you are to do each of the following:	Very likely		Somewhat likely		Somewhat unlikely		Very	unlikely	To	otal
Recommend living in Albemarle County to someone who asks	56%	N=205	32%	N=116	10%	N=37	3%	N=9	100%	N=367
Remain in Albemarle County for the next five years	63%	N=230	24%	N=89	5%	N=19	8%	N=28	100%	N=366

Table 4: Question 4

Please rate how safe or unsafe you feel:	Ver	y safe	Somew	/hat safe	e Neither safe nor unsafe		fe nor unsafe Somewhat unsafe		Very unsafe		To	otal
In your neighborhood during the day	76%	N=280	21%	N=77	3%	N=10	0%	N=2	0%	N=1	100%	N=370

Table 5: Question 5

Please rate each of the following characteristics as they relate to Albemarle County as a whole:	Exc	ellent	G	Good	F	air	P	oor	To	otal
Traffic flow on major streets	6%	N=21	38%	N=140	40%	N=147	17%	N=63	100%	N=370
Ease of public parking	7%	N=27	35%	N=126	37%	N=135	20%	N=74	100%	N=362
Ease of travel by car in Albemarle County	11%	N=41	46%	N=169	31%	N=116	12%	N=43	100%	N=368
Ease of travel by public transportation in Albemarle County	8%	N=15	15%	N=27	33%	N=58	43%	N=76	100%	N=175
Ease of travel by bicycle in Albemarle County	6%	N=12	21%	N=45	33%	N=70	40%	N=83	100%	N=210

Appendix B: Benchmark Comparisons

Comparison Data

NRC's database of comparative resident opinion comprises resident perspectives gathered in surveys from over 500 communities whose residents evaluated the same kinds of topics on The National Citizen Survey™. The comparison evaluations are from the most recent survey completed in each community; most communities conduct surveys every year or in alternating years. NRC adds the latest results quickly upon survey completion, keeping the benchmark data fresh and relevant. The communities in the database represent a wide geographic and population range. Albemarle County chose to have comparisons made to the entire database and a subset of similar jurisdictions from the database (university communities with populations between 75,000 and 300,000).

Interpreting the Results

Ratings are compared when there are at least five communities in which a similar question was asked. Where comparisons are available, four columns are provided in the table. The first column is Albemarle County's "percent positive." The percent positive is the combination of the top two most positive response options (i.e., "excellent" and "good," "very safe" and "somewhat safe," etc.), or, in the case of resident behaviors/participation, the percent positive represents the proportion of respondents indicating "yes" or participating in an activity at least once a month. The second column is the rank assigned to Albemarle County's rating among communities where a similar question was asked. The third column is the number of communities that asked a similar question. The final column shows the comparison of Albemarle County's rating to the benchmark.

In that final column, Albemarle County's results are noted as being "higher" than the benchmark, "lower" than the benchmark or "similar" to the benchmark, meaning that the average rating given by Albemarle County residents is statistically similar to or different (greater or lesser) than the be

Region Percent New England 3% Middle Atlantic 5% East North Central 15% West North Central 13% South Atlantic 22% East South Central 3% West South Central 7% Mountain 16% Pacific 16% Population Percent Less than 10,000 10% 10,000 to 24,999 22% 25,000 to 49,999 23% 50,000 to 99,999 22% 100,000 or more 23%

Benchmark Database Characteristics

residents is statistically similar to or different (greater or lesser) than the benchmark. More extreme differences are noted as "much higher" or "much lower."

Appendix C: Detailed Survey Methods

The National Citizen Survey (The NCS^{TM}), conducted by National Research Center, Inc., was developed to provide communities an accurate, affordable and easy way to assess and interpret resident opinion about important local topics. Standardization of common questions and survey methods provide the rigor to assure valid results, and each community has enough flexibility to construct a customized version of The NCS.

Results offer insight into residents' perspectives about the community as a whole, including local amenities, services, public trust, resident participation and other aspects of the community in order to support budgeting, land use and strategic planning and communication with residents. Resident demographic characteristics permit comparison to the Census as well as comparison of results for different subgroups of residents. Albemarle County funded this research. Please contact Louise Wyatt, Organization Development Manager with Albemarle County at lwyatt@albemarle.org if you have any questions about the survey.

Survey Validity

The question of survey validity has two parts: 1) how can a community be confident that the results from those who completed the questionnaire are representative of the results that would have been obtained had the survey been administered to the entire population? and 2) how closely do the perspectives recorded on the survey reflect what residents really believe or do?

To answer the first question, the best survey research practices were used for the resources spent to ensure that the results from the survey respondents reflect the opinions of residents in the entire community. These practices include:

- Using a mail-out/mail-back methodology, which typically gets a higher response rate than phone for the same dollars spent. A higher response rate lessens the worry that those who did not respond are different than those who did respond.
- Selecting households at random within the community to receive the survey to ensure that the households selected to receive the survey are representative of the larger community.
- Over-sampling multi-family housing units to improve response from hard-to-reach, lower income or younger apartment dwellers.
- Selecting the respondent within the household using an unbiased sampling procedure; in this case, the "birthday method." The cover letter included an instruction requesting that the respondent in the household be the adult (18 years old or older) who most recently had a birthday, irrespective of year of birth.
- Contacting potential respondents three times to encourage response from people who may have different opinions or habits than those who would respond with only a single prompt.
- Inviting response in a compelling manner (using appropriate letterhead/logos and a signature of a visible leader) to appeal to recipients' sense of civic responsibility.
- Providing a pre-addressed, postage-paid return envelope.
- Offering the survey in Spanish or other language when requested by a given community.
- Weighting the results to reflect the demographics of the population.

The answer to the second question about how closely the perspectives recorded on the survey reflect what residents really believe or do is more complex. Resident responses to surveys are influenced by a variety of factors. For questions about service quality, residents' expectations for service quality play a role as well as the "objective" quality of the service provided, the way the resident perceives the entire community (that is, the context in which the service is provided), the scale on which the resident is asked to record his or her opinion and, of course, the opinion, itself, that a resident holds about the service. Similarly a resident's report of certain behaviors is colored by what he or she believes is the socially desirable response (e.g., reporting tolerant behaviors toward "oppressed groups," likelihood of voting for a tax increase for services to poor people, use of alternative modes of travel to work besides the single occupancy vehicle), his or her memory of the actual behavior (if it is not a question speculating about future actions, like a vote), his or her confidence that he or she can be honest without suffering any negative consequences (thus the need for anonymity) as well as the actual behavior itself.

How closely survey results come to recording the way a person really feels or behaves often is measured by the coincidence of reported behavior with observed current behavior (e.g., driving habits), reported intentions to behave with observed future behavior (e.g., voting choices) or reported opinions about current community quality

The National Citizen Survey™

with objective characteristics of the community (e.g., feelings of safety correlated with rates of crime). There is a body of scientific literature that has investigated the relationship between reported behaviors and actual behaviors. Well-conducted surveys, by and large, do capture true respondent behaviors or intentions to act with great accuracy. Predictions of voting outcomes tend to be quite accurate using survey research, as do reported behaviors that are not about highly sensitive issues (e.g., family abuse or other illegal or morally sanctioned activities). For self-reports about highly sensitive issues, statistical adjustments can be made to correct for the respondents' tendency to report what they think the "correct" response should be.

Research on the correlation of resident opinion about service quality and "objective" ratings of service quality vary, with some showing stronger relationships than others. NRC's own research has demonstrated that residents who report the lowest ratings of street repair live in communities with objectively worse street conditions than those who report high ratings of street repair (based on road quality, delay in street repair, number of road repair employees). Similarly, the lowest rated fire services appear to be "objectively" worse than the highest rated fire services (expenditures per capita, response time, "professional" status of firefighters, breadth of services and training provided). Resident opinion commonly reflects objective performance data but is an important measure on its own. NRC principals have written, "If you collect trash three times a day but residents think that your trash haul is lousy, you still have a problem."

Selecting Survey Recipients

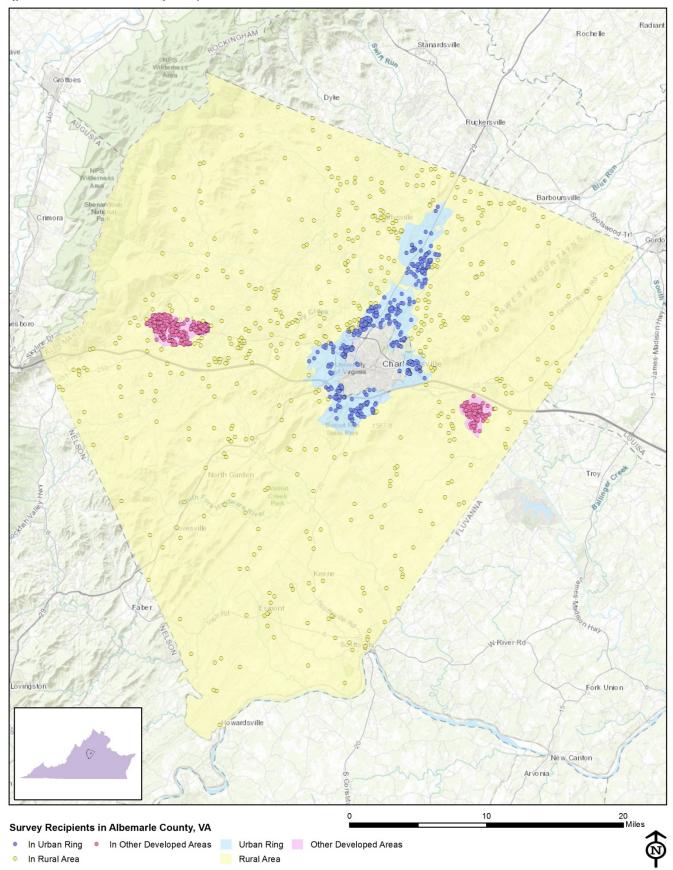

"Sampling" refers to the method by which households were chosen to receive the survey. All households within Albemarle County were eligible to participate in the survey. A list of all households within the zip codes serving Albemarle County was purchased from Go-Dog Direct based on updated listings from the United States Postal Service. Since some of the zip codes that serve Albemarle County households may also serve addresses that lie outside of the community, the exact geographic location of each housing unit was compared to community boundaries using the most current municipal boundary file (updated on a quarterly basis) and addresses located outside of Albemarle County boundaries were removed from consideration. Each address identified as being within County boundaries was further identified as being within one three designated subareas (urban ring, rural areas or other developed areas).

To choose the 1,500 survey recipients, a systematic sampling method was applied to the list of households previously screened for geographic location. Systematic sampling is a procedure whereby a complete list of all possible households is culled, selecting every *Nth* one, giving each eligible household a known probability of selection, until the appropriate number of households is selected. Multi-family housing units were selected at a higher rate as residents of this type of housing typically respond at lower rates to surveys than do those in single-family housing units. Figure 1 displays a map of the households selected to receive the survey. In general, because of the random sampling techniques used, the displayed sampling density will closely mirror the overall housing unit density (which may be different from the population density). While the theory of probability assumes no bias in selection, there may be some minor variations in practice (meaning, an area with only 15% of the housing units might be selected at an actual rate that is slightly above or below that).

An individual within each household was selected using the birthday method. The birthday method selects a person within the household by asking the "person whose birthday has most recently passed" to complete the questionnaire. The underlying assumption in this method is that day of birth has no relationship to the way people respond to surveys. This instruction was contained in the cover letter accompanying the questionnaire.

In addition to the scientific, random selection of households, a link to an online "opt-in" survey was publicized and posted to the Albemarle County website. This opt-in survey was identical to the scientific survey and open to all County residents. (The data presented in this report exclude the opt-in survey data. These data can be found in the *Supplemental Web Results* provided under separate cover.)

Figure 1: Location of Survey Recipients

Survey Administration and Response

Selected households received three mailings, one week apart, beginning on June 5th, 2017. The first mailing was a prenotification postcard announcing the upcoming survey. The next mailing contained a letter from the Interim County Executive inviting the household to participate, a questionnaire and a postage-paid return envelope. The final mailing contained a reminder letter, another survey and a postage-paid return envelope. The second cover letter asked those who had not completed the survey to do so and those who had already done so to refrain from turning in another survey. The survey was available in English only. Respondents could opt to take the survey online as well. Completed surveys were collected over the following seven weeks. The online "opt-in" survey became available to all residents on July 17th, 2017 and remained open for two weeks.

About 3% of the 1,500 surveys mailed were returned because the housing unit was vacant or the postal service was unable to deliver the survey as addressed. Of the remaining 1,451 households that received the survey, 382 completed the survey, providing an overall response rate of 26%. Of the 382 completed surveys, 63 were completed online. Additionally, responses were tracked by subarea; response rates by subarea ranged from 20% to 30%. The response rates were calculated using AAPOR's response rate #2¹ for mailed surveys of unnamed persons. Additionally, 379 residents completed the online "opt-in" survey.

Table 95: Survey Response Rates by Subarea

			Other developed	
	Urban Ring	Rural Areas	areas	Overall
Total sample used	500	500	500	1,500
I=Complete Interviews	95	138	141	374
P=Partial Interviews	1	1	6	8
R=Refusal and break off	0	0	0	0
NC=Non Contact	0	0	0	0
O=Other	0	0	0	0
UH=Unknown household	0	0	0	0
UO=Unknown other	383	345	341	1,069
Response rate: $(I+P)/(I+P) + (R+NC+O) + (UH+UO)$	20%	29%	30%	26%

Confidence Intervals

It is customary to describe the precision of estimates made from surveys by a "level of confidence" and accompanying "confidence interval" (or margin of error). A traditional level of confidence, and the one used here, is 95%. The 95% confidence interval can be any size and quantifies the sampling error or imprecision of the survey results because some residents' opinions are relied on to estimate all residents' opinions.²

The margin of error for the Albemarle County survey is no greater than plus or minus five percentage points around any given percent reported for all respondents (382 completed surveys).

For subgroups of responses, the margin of error increases because the number of respondents for the subgroup is smaller. For subgroups of approximately 100 respondents, the margin of error is plus or minus 10 percentage points.

_

¹ See AAPOR's Standard Definitions here: http://www.aapor.org/Standards-Ethics/Standard-Definitions-(1).aspx for more information ² A 95% confidence interval indicates that for every 100 random samples of this many residents, 95 of the confidence intervals created will include the "true" population response. This theory is applied in practice to mean that the "true" perspective of the target population lies within the confidence interval created for a single survey. For example, if 75% of residents rate a service as "excellent" or "good," then the 4% margin of error (for the 95% confidence interval) indicates that the range of likely responses for the entire community is between 71% and 79%. This source of uncertainty is called sampling error. In addition to sampling error, other sources of error may affect any survey, including the non-response of residents with opinions different from survey responders. Though standardized on The NCS, on other surveys, differences in question wording, order, translation and data entry, as examples, can lead to somewhat varying results.

Survey Processing (Data Entry)

Upon receipt, completed surveys were assigned a unique identification number. Additionally, each survey was reviewed and "cleaned" as necessary. For example, a question may have asked a respondent to pick two items out of a list of five, but the respondent checked three; in this case, NRC would use protocols to randomly choose two of the three selected items for inclusion in the dataset.

All surveys then were entered twice into an electronic dataset; any discrepancies were resolved in comparison to the original survey form. Range checks as well as other forms of quality control were also performed.

NRC used Qualtrics, a web-based survey and analytics platform, to collect the online survey data. Use of an online system means all collected data are entered into the dataset when the respondents submit the surveys. Skip patterns are programmed into system so respondents are automatically "skipped" to the appropriate question based on the individual responses being given. Online programming also allows for more rigid control of the data format, making extensive data cleaning unnecessary.

A series of quality control checks were also performed in order to ensure the integrity of the web data. Steps may include and not be limited to reviewing the data for clusters of repeat IP addresses and time stamps (indicating duplicate responses) and removing empty submissions (questionnaires submitted with no questions answered).

Survey Data Weighting

The demographic characteristics of the survey respondents were compared to those found in the 2010 Census and American Community Survey estimates for adults in Albemarle County. The primary objective of weighting survey data is to make the survey respondents reflective of the larger population of the community. The characteristics used for weighting were housing tenure (rent or own), housing unit type (attached or detached), race, ethnicity, sex and age. No adjustments were made for design effects. The results of the weighting scheme are presented in the following table.

Table 96: Albemarle County, VA 2017 Weighting Table

Characteristic	Population Norm	Unweighted Data	Weighted Data
Housing			
Rent home	34%	18%	32%
Own home	66%	82%	68%
Detached unit	66%	74%	67%
Attached unit	34%	26%	33%
Race and Ethnicity			
White	83%	91%	84%
Not white	17%	9%	16%
Not Hispanic	95%	97%	95%
Hispanic	5%	3%	5%
Sex and Age			
Female	53%	56%	54%
Male	47%	44%	46%
18-34 years of age	27%	9%	24%
35-54 years of age	37%	27%	36%
55+ years of age	36%	64%	39%
Females 18-34	14%	7%	14%
Females 35-54	19%	15%	19%
Females 55+	20%	34%	21%
Males 18-34	13%	2%	10%
Males 35-54	17%	12%	17%
Males 55+	16%	30%	18%

Survey Data Analysis and Reporting

The survey dataset was analyzed using the Statistical Package for the Social Sciences (SPSS). For the most part, the percentages presented in the reports represent the "percent positive." The percent positive is the combination of the top two most positive response options (i.e., "excellent" and "good," "very safe" and "somewhat safe," "essential" and "very important," etc.), or, in the case of resident behaviors/participation, the percent positive represents the proportion of respondents indicating "yes" or participating in an activity at least once a month.

On many of the questions in the survey respondents may answer "don't know." The proportion of respondents giving this reply is shown in the full set of responses included in Appendix A. However, these responses have been removed from the analyses presented in the reports. In other words, the tables and graphs display the responses from respondents who had an opinion about a specific item. The data for the opt-in survey are presented separately in the report titled *Supplemental Web Results*.

Appendix D: Survey Materials

Dear Albemarle County Resident,

It won't take much of your time to make a big difference!

Your household has been randomly selected to participate in a survey about your community. Your survey will arrive in a few days.

Thank you for helping create a better county!

Sincerely,

Doug C. Walker

Interim County Executive

Dear Albemarle County Resident,

It won't take much of your time to make a big difference!

Your household has been randomly selected to participate in a survey about your community. Your survey will arrive in a few days.

Thank you for helping create a better county!

Sincerely,

Doug C. Walker

Interim County Executive

Dear Albemarle County Resident,

It won't take much of your time to make a big difference!

Your household has been randomly selected to participate in a survey about your community. Your survey will arrive in a few days.

Thank you for helping create a better county!

Sincerely,

Doug C. Walker

COUNTY OF ALBEMARLE

Office of the County Executive 401 McIntire Road Charlottesville, Virginia 22902-4596 (434) 296-5841 FAX (434) 296-5800

June 2017

Dear Albemarle County Resident:

Please help us shape the future of Albemarle County! You have been selected at random to participate in the 2017 Albemarle County Citizen Survey.

Please take a few minutes to fill out the enclosed survey. Your participation in this survey is very important — especially since your household is one of only a small number of households being surveyed. Your feedback will help Albemarle County make decisions that affect our county.

A few things to remember:

- Your responses are completely anonymous.
- In order to hear from a diverse group of residents, the adult 18 years or older in your household who most recently had a birthday should complete this survey.
- You may return the survey by mail in the enclosed postage-paid envelope, or you can complete the survey online at:

http://bit.ly/albemarlecounty2017

If you have any questions about the survey please call 434-296-5841.

Thank you for your time and participation!

Sincerely,

Doug C. Walker

Interim County Executive

June 2017

Dear Albemarle County Resident:

Here's a second chance if you haven't already responded to the 2017 Albemarle County Citizen Survey! (If you completed it and sent it back, we thank you for your time and ask you to recycle this survey. Please do not respond twice.)

Please help us shape the future of Albemarle County! You have been selected at random to participate in the 2017 Albemarle County Citizen Survey.

Please take a few minutes to fill out the enclosed survey. Your participation in this survey is very important — especially since your household is one of only a small number of households being surveyed. Your feedback will help Albemarle County make decisions that affect our county.

A few things to remember:

- Your responses are completely anonymous.
- In order to hear from a diverse group of residents, the adult 18 years or older in your household who most recently had a birthday should complete this survey.

Doug C. Walker

Interim County Executive

Albemarle County 2017 Citizen Survey

Please complete this questionnaire if you are the adult (age 18 or older) in the household who most recently had a birthday. The adult's year of birth does not matter. Please select the response (by circling the number or checking the box) that most closely represents your opinion for each question. Your responses are anonymous and will be reported in group form only.
